THE POWER OF O-PLACENTA

The newest, most advanced anti-aging and age reversal line of stem cell products formulated uses the **O-PLACENTA proprietary process**

USING THESE PRODUCTS HAVE MANY BENEFITS THAT INCREASE THE SKIN'S ELASTICITY, HELPING REDUCE FINE LINES AND WRINKLES, HYDRATING, LIGHTENING AGE SPOTS AND REGENERATING SKIN CELLS

Stem Cells. What are they? Do they work and do they really help make you look younger?

They are little embryos with no memory and they are being considered a wonder anti-aging treatment to help decrease wrinkles and make skin look younger.

Experts from the beauty market industry have predicted that from 2012 to 2016, the industry will have increased tremendously, based on population growth of women in the 55+ age category who are the primary buyers of anti-aging products. With over 50 percent of men and women now saying that they would like to enhance their looks with cosmetic procedures, the search for non-invasive methods continues to grow more than ever before.

Today's top treatments involve being filled, plumped, lasered and contoured because over time the skin loses volume which makes the face and body looked aged.

Stem cell products come from various sources as from the placenta of sheep, pigs, apples and humans (fetal after delivery).

The placenta is the flat meaty organ that serves as a cross-over for nutrients, oxygen and waste between the mother and baby. The amniotic sac lines the uterus, along with the corion, which is another membrane. The placenta attaches into the wall of the uterus. We want to make sure the stem cells are from a safe source from which to derive proteins. These proteins are highly purified and unpolluted and may be more nutritious to the person being treated.

Stem cells have no memory and are designed either to become bone, heart or eventually something that the body needs as the body keeps growing. Since it's an embryo, it is still new and has no memory as to what it should be doing so it rejuvenates and it causes rejuvenation.

"The latest and newest development in skin care is using sheep stem cells, amniotic cells to produce new proteins and signaling proteins designed to make the skin more radiant," commented Dr. Harold Lancer, M.D., F.A.A.D., a renowned Beverly Hills dermatologist. The newest, most advanced anti-aging and age reversal line of stem cell products formulated uses the O-PLACENTA proprietary process.

O-PLACENTA is the most nutrient-rich and potent form of ovine placenta extract. Clinical formulation utilizes proprietary

process to activate dormant stem cells, which leads to their multiplication of the cell content and rejuvenation.

The placenta and umbilical cord tissue cells are ethically harvested from sheep, post birth, so there is absolutely no harm to the animals. O-PLACENTA stem cell products provide exceptional results by transferring large numbers of bio-active stem cells directly to the dermis of the face. When applied, the skin becomes revitalized and the younger skin cells immediately begin producing increased levels of collagen, glycoproteins, and elastic fibers in the skin's extra cellular matrix as they did in the past. This creates a "de-aging" effect.

Using O-PLACENTA products have many benefits that increase the skin's elasticity, helping reduce fine lines and wrinkles, hydrating, lightening age spots and regenerating skin cells. Other benefits are reducing inflammation associated with rosacea also healing and preventing acne including anti-aging and anti-oxidant properties.

Energize your skin with the power of O-PLACENTA. **IMAGE**
